

XXC-52

Task Force Tips © 2013

Combination Packages

Part No: **XXC-52**

Monitor Configuration	Portable
Flow Rate - Monitors	0-500 gpm (0-2000 l/min)
Operation Energy Source	Manual
Monitor Inlet	2.5 Inch Rocker Lug
Monitor Outlet	2.5 inch (65mm)
Horizontal Control	N/A
Horizontal Movement (degrees)	20 left and 20 right of center
Vertical Control	N/A
Vertical Movement (degrees)	10 above to 50 above horizontal
Safety Shutoff	With Safety Shutoff
Pressure Relief Valve	No PRV
Valve Design	Slide Valve (Aluminum)
Finish	Powdercoated Dark Blue
Certifications	N/A

PRODUCT SERIES OVERVIEW

• The Blitzfire Portable Monitor is manufactured from lightweight high strength aluminum alloy that has been hard coat anodized and powder coated for ultimate corrosion protection. The unique stainless steel slide valve design provides total nozzleman flow control and integrates TFT's patented safety shut off to prevent unintended movement.

• The Blitzfire Portable Monitor offers an exclusive 10 degree low attack angle, 20 degree side to side horizontal movement, and a rear pivoting inlet for added fireground stability. An optional oscillation feature provides an automatic 20-30-40 degree sweep, and can easily be overridden for manual operation.

• The Blitzfire Portable Monitor is the only personal portable monitor to offer your choice of a dual pressure automatic master stream nozzle or stacked tips and is easily stored or deployed from a stainless mounting bracket. A safety tie down strap, integrated stream straightener, and unique folding legs with carbide tips are standard.
