Details

I BEAM CLAMP/2" HITCH MOUNT

This hardcoat anodized and stainless steel clamp can be quickly attached to an I-beam and other objects, such as stair rails, by one person, without the use of tools. Once the clamp is attached, the Hemisphere monitor is attached to the clamp by sliding the socket at the base of the monitor over the adjustable mounting base. The mounting base and clamp fixed end can be moved to any of the 42 positions on the backbone, for maximum versatility. Detented pins hold the mounting base and clamp fixed end in place, while a travel stop keeps the pins attached, to prevent them from being dropped or lost. The clamp arm and fixed end can be removed, and the backbone can be inserted into any standard 2" hitch, giving the ability to quickly add a monitor to most vehicles, without costly modifications.

Weight: 18.000 lbs (kg)
